

Dr. Jefferson

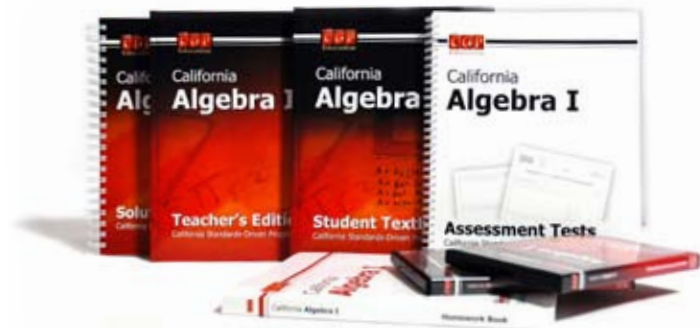

Dr. Elena Jefferson

- 48, BS in Mathematics, Masters in Education, PhD in Childhood Psychology
- District Administrator for 7 years in a large district, was a middle school Math teacher for 12 years
- Helped improve test scores for three straight years, but feels she needs to make changes to continue improving

“Over recent years, results in my district have leveled out. The resources we’re using have become more and more complex and less and less effective. Last year, we identified a significant problem with Algebra I proficiency in 8th grade moving into High School. I’ve got 12 new Math teachers starting in my schools this year — I need a program that will really get results while helping all of my teachers.”

Programs just for California

District Administrators like Elena will help their teachers succeed by using CGP Education’s programs to **meet the challenges** that exist in California classrooms. We have developed three entirely new programs **specifically for California**. We spent years researching the unique educational environment in California and we based these programs on our findings. **Every California standard is thoroughly covered**, without any extraneous content. Standards are clearly mapped within each component to ensure that teaching and learning remains **on track and focused**.

Supporting all district needs

CGP Education’s programs have features for every teacher in a district. They all contain just ten components — because we know that Elena is interested in **quality... not quantity**.

We have **done the groundwork** for the new teachers and non-Math specialists in Elena’s district making it easy for them to get on their feet and deliver successful Math classes. Everything Elena’s teachers need in the Lesson is already there — from the best examples to use in class to matched Homework Sheets ready for students to take home. Our assessment tools provide the novice to experienced teacher with all of the prescriptive information necessary to **maximize and personalize the course of instruction**.

Imagine having the most highly qualified Math trainers available to your district and school whose only goal is to assure student success with the CGP Education curriculum — **for free!**

Our team of curriculum trainers will spend time with Elena’s team of teachers — helping them get the most out of our programs and addressing their specific needs. Our training is **flexible and personalized** — we don’t have a rigid structure, instead we’ll provide what Elena and her team need for success. Whether they need help teaching Advanced Learners or Strategic Learners (or both!) we’ll develop a plan that drives success!

Tiffany Bennett CGP Education Curriculum Trainer Los Angeles, Central CA

Tiffany is an experienced educator — she has taught both high school students and adults, and has run teacher training workshops integrating Math, Science, and Technology in the classroom.

“If the teacher does not enjoy the Lesson that he or she is presenting, then how do you think the students feel? Lessons should be engaging for all parties involved.”

Improving students’ grades

CGP Education’s programs are a good choice for the students in Elena’s district. The student textbooks are written in clear, straightforward language so that students can learn the facts and methods they need without distraction. At less than 4 pounds and 500 pages, our textbooks are **accessible, manageable** resources for **today’s California students**.

CGP Education — helping teachers **improve** test scores across California!
